Subject: Re: STOP Spillover is in!

Congrats Chris and all, and a huge thanks for everyone's brainstorming and heavy lift on the writing, and especially for the RAPID RESPONSE to this call.

I'm feeling very hopeful about the outcome — nice to feel positive about something these days!

Everyone,

We have submitted our STOP Spillover proposal for consideration by USAID, as attached. We were able to get the proposal in last night, in advance of the deadline, and received a confirmatory email of receipt early this morning. We had to whittle it down quite a bit to meet length requirements so some of our excellent ideas might not be reflected in the writing, but will be on deck for us to include if we get to implement.

We think the proposal came together very well, integrating your remarkable breath of expertise in a way that

definitely stretched us all well outside our usual cross-disciplinary scope. I am amazed by your commitment to getting this done, not just for this proposal, but for your longer view of having an impact on global health. Everyone's willingness to provide honest input and tireless offers to pitch in far exceeded what is expected of us professionally and is clear evidence that you all do whatever it takes to make the world better. We can't imagine a better team to do this work, so very much hoping we get the opportunity to tackle these challenges together.

/Chris
